# Republika Frontend instructions

When user comes to website for the first time, he can see all posts, parties, news and to see content of menu items. User can sort post on front page by rank, chronological or by popularity and he can filter view by tag, type of badge, type of post and by interval.

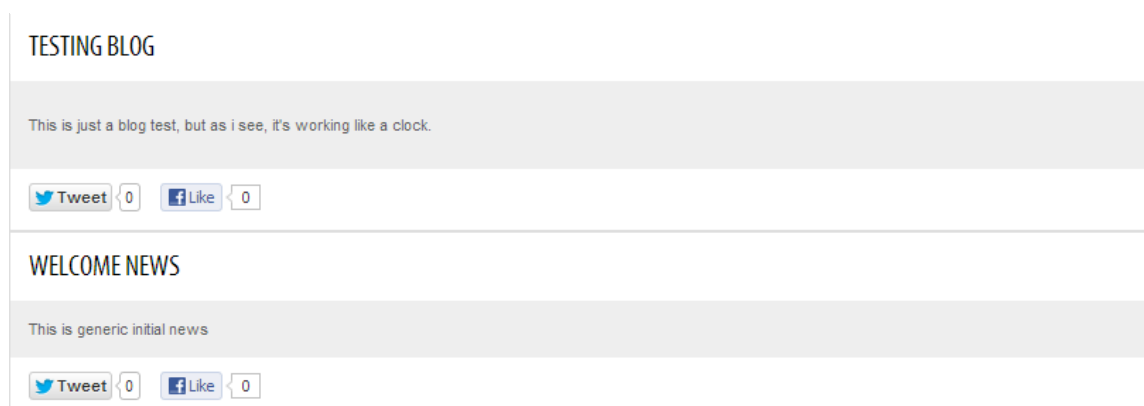

When user clicks on menu item **Parties**, he will see all exists parties which are arranged by rank. And when he clicks on any party, that will open all posts from that party. On the right side, there is facebook box which shows latest post from party's facebook page.

Also he can see graphic on the right side of page that shows statistic of used badges in that party.

When user clicks on menu item **News**, he will see all latest news and user can tweet about every news or to like it.

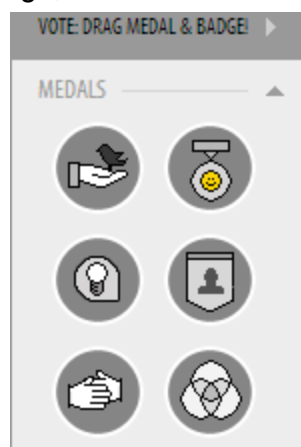

1. Vote process

User can vote for every post unlimited times, but it will be counted only the last vote.
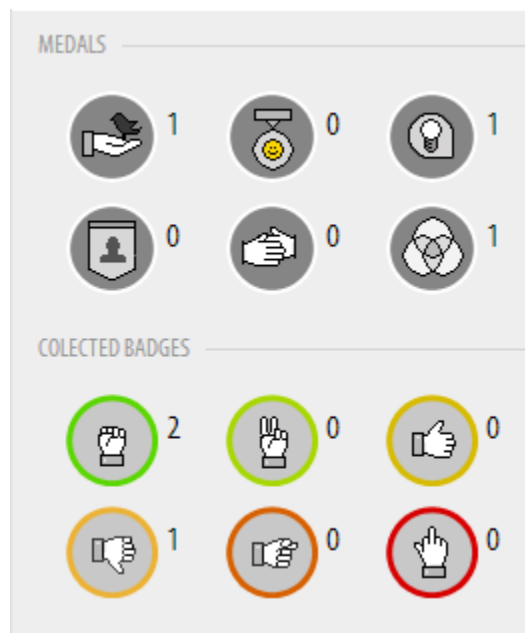

Vote process has two parts:

- First part is to drag icon which is called **Medal**, to desired post and to release over it. User can vote on home page and also on post page, there is no difference.

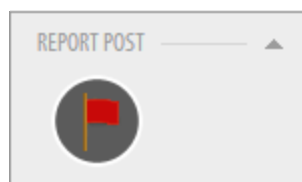

- Second part is to drag icon which is called **Badge,** to desired post and to release over it. User can vote on home page and also on post page, there is no difference.

There is no need to vote with badges and the medals, it is enough to vote just with one type of icon. When user drag one of the medals over desired post, that post will change it's medals on top left corner. Also when user drag one of the badges over desired post, that post will change color of upper line in color that represent sum of all previous badges. When user opens any of posts, on the right side, he can see all votes for that post, like it is shown in the picture below.

Special case is when user finds some post is inappropriate, then he could flag that post by dragging report flag over post.

After that, system will show text field for user comment about fagged post, and when user fill text field he send his report to administrator by clicking button **Report**.
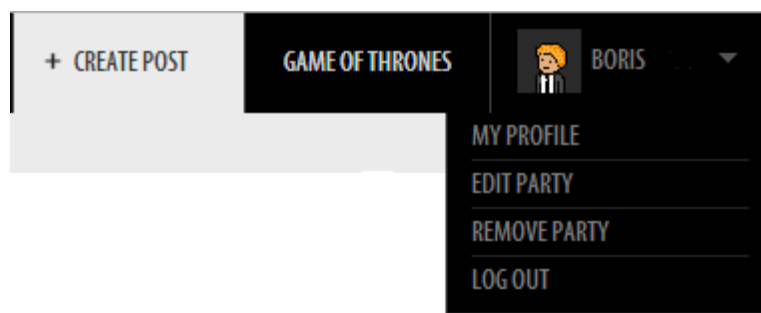

2. Login/Register

When user clicks on login link, he needs to enter username and password, or if he is not registered yet he must enter username, password and confirm password.

After user enter requested data and click on **Register** button, first he will see success message and *Terms of Use*, and then he will be redirected to home page. When he is logged, he can see new menu on top right corner.

3. User menu

When user is logged, he can see new menu with next items:

- **Create post** - this leads to page where user can create new post that could be different type (text, photo, video, link, quote, poll)
